INSTRUCTIONS FOR:

GROMMETS MACHINE

PRODUCT SPECIFICATIONS

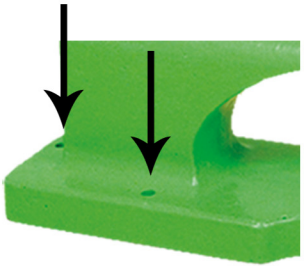
- Grommet Machine Dimensions: 3.5“ W x 16.5“ H x 9.75“ D
- Weight: 12.66 lbs.
- Accepts Grommet Die Sizes: #0, #1, #2, #3

Product Parts
1 - Handle
2 - Top Grommet Die
3 - Bottom Grommet Die

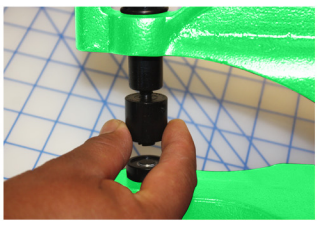
Parts 2 & 3 shown = #2 Die Included
Replace Parts 2 & 3 to Change Die Size

Step 1
Take all parts out of the box.

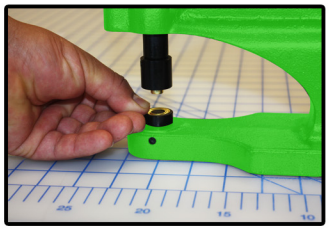
Step 2
(Optional) Carefully select the permanent location for the Grommet Machine. With the Grommet Machine in position, mark the placement of the holes. Set the Grommet Machine to the side, and pre-drill the holes into the work bench. Move the Grommet Machine back into position and fix it in place with appropriate length screws to get a solid grip into the workbench.



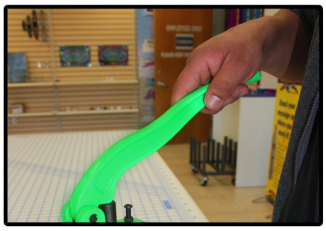
Step 3
(Unit comes with #2 Grommet Die pre-installed.)
Select the correct size Grommet Die to fit your Grommets (the Grommet Machine comes standard with a #2 Grommet Die, other sizes sold seperately). Attach the Grommet Die to the Grommet Machine by screwing the Top Grommet Die (2) into the hole in the bottom of the vertical bar on the Grommet Machin, and by screwing the Bottom Grommet Die (3) into the hole in the base. (Other dies are replaced in the same fashion.)

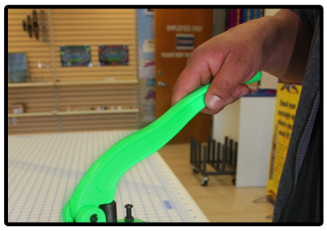


Step 4
Holding the Male Grommet with the piercing shaft facing down, place it on the bottom side of the Top Grommet Die (2). The Top Grommet Die should hold the Grommet in place. Place the Female Grommet with the smooth side facing down into the tray on the Bottom Grommet Die (3).



Step 5
Place the Graphic between the Grommet Dies (2 & 3) and align the desired location of the Grommet with the piercing shaft of the Male Grommet. Press down on the Handle (1). You will have to exert some force in order to fully pierce the material and bond the grommets.





Step 6
Repeat Steps 3 & 4 with all other desired grommet locations.

Step 7
Check the Grommets, and remove the residual material from the center of the Grommet.
