Paint Arrestor Selection Table -- Other Considerations

Testing efficiencies on all three products vary only slightly as a result testing efficiency is not the critical determinant for selecting the correct paint arrestor

Proper paint arrestor selection relates to optimizing minimal run-off and maximum holding capacity against premature face loading and filter failure to maximize filter life and thereby minimize costs

Specific application methods could result in slight differences as selection guide is based upon historical averages

40 CFR PART 63 (HHHHHH)

Compliance Certificates Available At

Instructions for Measuring Ceiling Filters

1) If you can, measure the EXACT size of existing filters.
2) If that is not possible, measure filter frame.
3) Add 4" to frame measurements to allow "tuck in".
4) Trim to fit if needed.
