

EXCELLART

SIGN PRODUCTS, LLC

"There is no greater satisfaction than delivering a finished product that helps a client reach their goals and objectives."

| PRODUCT CATALOG |

WELCOME

OUR MISSION AND PROMISE TO YOU

Excellart has been supplying aluminum frame extrusions for the sign industry for more than 50 years. We have continued to maintain our high standards and quality in our frame systems.

Our mission is to provide you with the highest quality products and services possible in a timely fashion and at a competitive price. We promise to listen to you and help you achieve your business goals. We will always be there with honest, expert advice and quick, friendly customer service.

Our goal is to meet and exceed your expectations.

We invite you to call a member of our professional staff for assistance in selecting the right frame system for your application.

BENEFITS OF USING ALUMINUM EXTRUSIONS

The process of extruding aluminum is similar to squeezing toothpaste from a tube; pushing an aluminum billet through a precise die to achieve innovative parts and products. Aluminum extrusions offer many benefits and advantages when comparing them to other solid metals:

-  **Less Fabrication Time:** Cost can be reduced significantly by replacing an assembly of components into one single extrusion. Extrusions can be produced to the desired shape and construction; eliminating costly man-hours to form and bend a custom shape.
-  **More Design Scope:** Extrusions can be used to simplify a larger project. Taking advantage of the opportunity to use aluminum extrusions on larger projects can reduce material costs, design time, and man-hours to ensure efficient production.
-  **Less Maintenance:** Aluminum is naturally a more durable metal, allowing for increased durability in all weather conditions.
-  **Less Weight, More Strength:** Aluminum is roughly one-third the weight of steel offering a high strength-to-weight ratio. Aluminum extrusion is ideal for projects requiring a low total weight without sacrificing strength, quality and durability.
-  **Faster Assembly:** Aluminum alloys can be welded, brazed, soldered, glued or joined with rivets or bolts. The extrusion process makes it possible to design shapes and components that would otherwise be impossible.

Orders

- No minimum order required
- Freight will be prepaid on orders over 2,000 pounds
- Normal production time: 3 working business days
- Rush orders will require an Expedite Fee
- Packaging Charges apply to every shipment
- \$25.00 fee for UPS shipments
- \$250.00 Crating Charge for all LTL shipments

UL Approval

- All Excellart products are UL Recognized Components for Light Boxes
- Excellart UL File Number is E152309
- Online Certificate: ul.com/dateabase

Returns

- Returns must be approved by Excellart
- Material must be in original packaging and sellable conditions
- Material must be shipped to Excellart Freight Prepaid
- Returns are subject to a 25% restocking charge
- Additional conditions may apply. Please contact a customer service representative for additional information.

**All pricing is subject to change without notice.*

STRUCTURAL FLEX FRAME SYSTEM KNOCKDOWN KITS

FEATURES & BENEFITS

Reduced Fabrication Time

- The flex frame is the main structure of the cabinet
- 6061 Structural Alloy for increased strength
- Lighter than steel making it easier to handle

Quicker Assembly

- No need to retro-fit the flex frame onto a steel structure

Build Any Depth of Cabinet

- Adjust the length of your square tube to build the desired cabinet depth

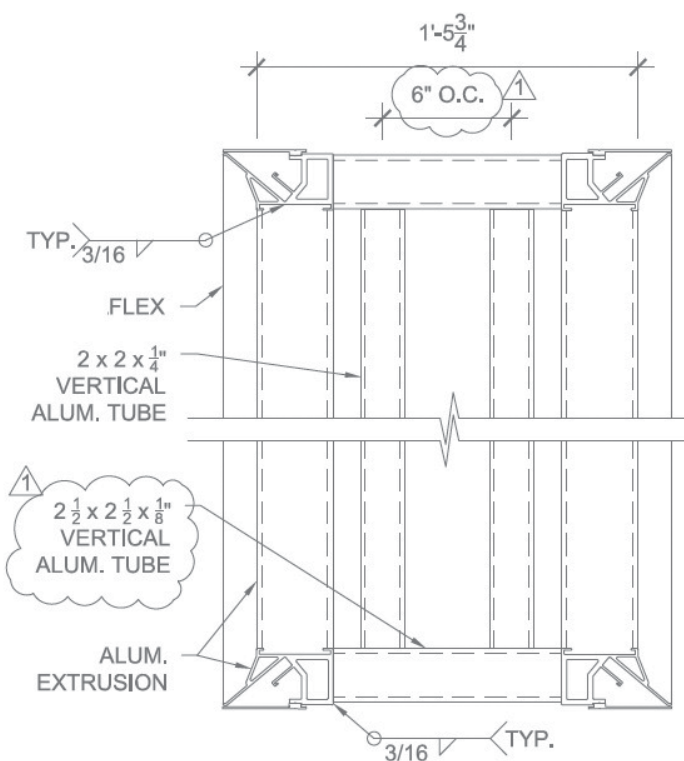

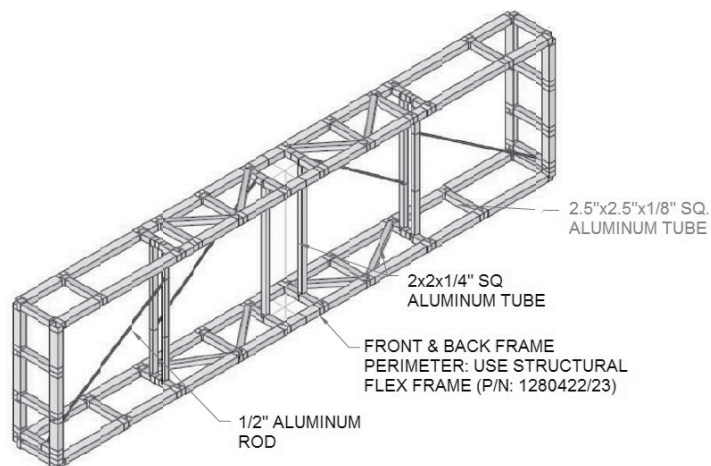

Easier Service Accessibility

- Create access panels in the sheared aluminum sheet to easily service the cabinet

***** Engineered drawings for specific wind loads available upon request for an additional fee.**

Kit includes: flex frame, trim cover, gussets, all aluminum clip systems, and cutting and packaging charges.

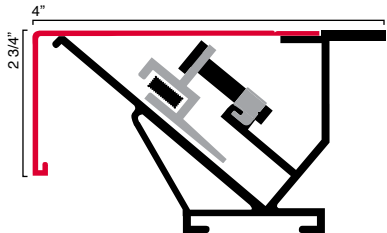

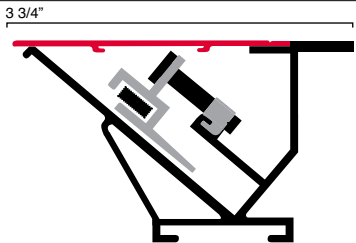

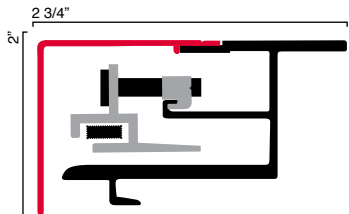

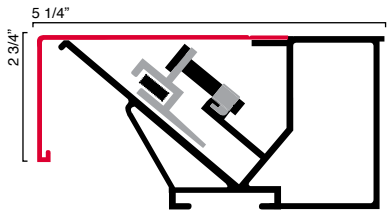

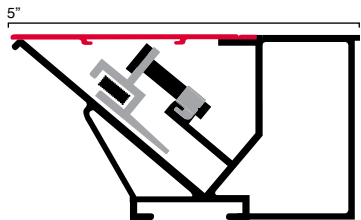

Square tubing available for additional cost (cut to size).

KERF-CUTTING

CUSTOM KERF-CUTTING CAPABILITIES FOR ALL CUSTOM SHAPES

Allow Excellart to do the work for you with our wide range of products and service offering. We offer the following for both rigid face and flex face signage:

- **Radius Corners**
- **Kerf-Cut Full Lengths**
- **Custom Shapes** (Cut specifically for your project)

Custom Kerf-Cutting is the process of cutting a series of kerfs (cuts) in a piece of aluminum at a predetermined distance allowing the piece of aluminum to be bent into the desired shape. Often times, this process can be very time consuming and requires a great deal of trial and error to ensure you achieve the proper spacing to effectively bend the material. Additionally, you do not want to make the cuts too deep as that can negatively affect the bend of the material, as well as, the outside finish.

We have developed a process of Kerf-Cutting to achieve the best possible solutions for our extrusions. Each radius is carefully drawn out and the proper spacing is figured to ensure the highest quality bend, fit, and finish for every project.

Give us a call today to discuss your project needs and how we can tailor our Kerf-Cutting capabilities specific to your project. Whether it be Kerf-Cut full length pieces or material Kerf-Cut specifically for each sign we can help you save time and money while still providing high quality extrusions and sign frames.

AT&T STADIUM

Kerf-Cut Flex Standard
Frame w/ Bleed Trim.
Letters are over 26' tall.

BANK OF AMERICA STADIUM

Kerf-Cut Flex Integrated
Frame w/ Bleed Trim.
Logo is approximately 40' tall.

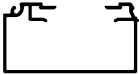

STARBUCKS
