## HOW TO BUILD A PART NUMBER

**0000-0000-000**

### THE FIRST SET OF FOUR

**DIGITS** in our part numbers identify the series of product and determine the converting process. Increasing the non-perforated product number by 50 identifies most perforated products.

### THE SECOND SET OF FOUR

**DIGITS** identify the material conversion size. The first two digits indicate the width and the last two digits indicate the length.

### THE THIRD SET OF THREE DIGITS

identify the color. All colors contain three digits.

<b>4200</b> Non-perforated 2.8 ml Calendered	-	<b>1515</b> Width = 15" Length = 150' (50 yds.) (The 0 in 150 is hidden)	-	<b>014</b> Color 014 (Tomato Red)
<b>4250</b> Perforated 2.8 ml Calendered	-	<b>3003</b> Width = 30" Length = 30' (10 yds.) (The 0 in 30 is hidden)	-	<b>003</b> Color 012 (Gloss Black)

**Note:** The standard punch is a Gerber-compatible slot pattern. True Gerber punch is also available.
